

Fireball

Arctotis

Arctotis Fireball is offering huge, crimson red flowers up to 8cm in diameter. The near black centre and halo of yellow adds to the intense visual impact this plant presents.

Fireball has the durability, strength and long flowering of Arctotis, with flowers raised above the strong, deep silver green foliage. Flowering from mid winter to late summer, this variety is bound to stand out and get noticed in any garden setting.

HIGHLIGHTS:

- Brilliant crimson red flowers up to 8cm diameter.
- Flowering from mid winter through to summer, Fireball is an **ideal winter crop**.
- Versatile, hardy and low growing
- Large flowers above attractive silver-green, lacy foliage, providing great colour contrast in the garden.
- Great for use in the home garden and in commercial applications
- Presents well in a 140mm or 175mm pot.
- Drought tolerant, reliable and suitable for coastal conditions.
